QATAR DEVELOPMENT BANK · DIGITAL SERVICES

SME Relief Portal

Emergency Financing Platform · NRGP Digital Delivery

Presented to	Date	Classification	Status
Senior Manager, Digital	March 2026	Confidential	Prototype Ready

1 Problem Statement

Why this portal is urgent and necessary

🌍 The Geopolitical Trigger

The Iran-Israel regional conflict has disrupted trade routes, fragmented supply chains, and suppressed regional demand for Qatar-registered SMEs. Revenue has dropped sharply while **fixed obligations remain due**: salaries under WPS and commercial lease payments.

⚠️ What Happens Without Action

- WPS fines: **QAR 6,000 per employee per late salary cycle**
- A 50-person SME faces QAR 300,000 in fines per month
- Commercial lease defaults and evictions
- Staff layoffs increasing national unemployment pressure
- Permanent business closures destroying economic value

🏦 The Missed Opportunity

QDB already operates the **National Relief & Guarantee Program (NRGP)** — a board-approved instrument used during COVID-19. The framework exists. The beneficiary list exists. The problem is **delivery speed**: the current manual process takes **15–30 business days** per application.

The Scale of the Problem

500+	~20	30 days
SMEs at immediate risk	Applications processed / week (manual)	Current processing time per application

✅ Why a Digital Portal is the Right Answer

- QDB **cannot scale manual review** fast enough to prevent harm
- Automated eligibility checking eliminates assessor bottlenecks
- WPS integration provides objective salary obligation evidence
- MOCI integration removes document fraud risk on CR data
- CRM routing ensures full audit trail and governance compliance
- Returning NRGP beneficiaries get **same-day auto-disbursement**

2 Solution Overview

What the QDB SME Relief Portal delivers

QAR 500K	0%	< 1 Day	< 5 Days	500+
MAX FINANCING PER SME	INTEREST RATE — RELIEF LOAN	AUTO-DISBURSEMENT PATH	MANUAL REVIEW PATH	APPLICATIONS / WEEK (DIGITAL)

🔄 Two Disbursement Pathways

Auto Disbursement — For returning NRGP beneficiaries (COVID-19 list). Documents are verified automatically. CRM case is created and funds disbursed within 24 hours.

Manual Review — For first-time applicants. Application is routed to a QDB Relationship Manager for review and decision within 5 business days.

🏛️ Built on Existing Infrastructure

- **NRGP** — Board-approved relief framework, already activated
- **Tawtheeq (NAS)** — Government identity authentication
- **MOCI** — Ministry of Commerce CR data verification
- **WPS** — Ministry of Labor payroll validation
- **Dynamics CRM** — QDB's existing case management system

APPLICATION FLOW

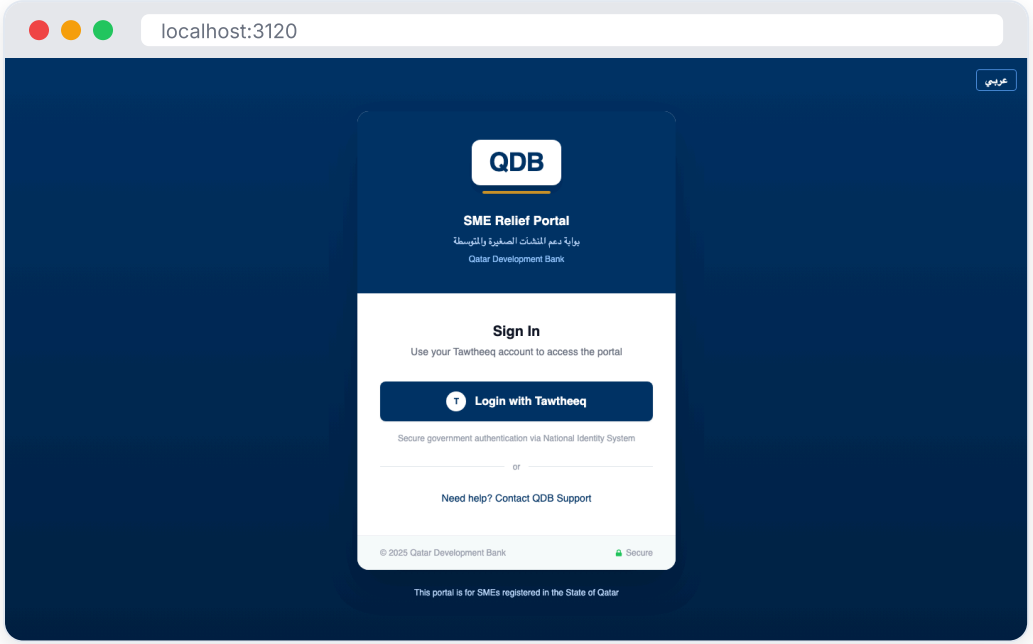
1. **Tawtheeq Login** — Secure government identity verification (NAS)
2. **CR Verification** — Enter CR number; details fetched live from MOCI
3. **Eligibility Check** — 7 NRGP criteria evaluated automatically in seconds
4. **NRGP List Check** — Determines Auto vs. Manual disbursement route
5. **Document Upload** — WPS file, salary evidence, lease, CR copy, authorisation

✓ **CRM Case Created** — Automatic or manual routing into Dynamics 365

3 Portal Walkthrough — Applicant Journey (1/4)

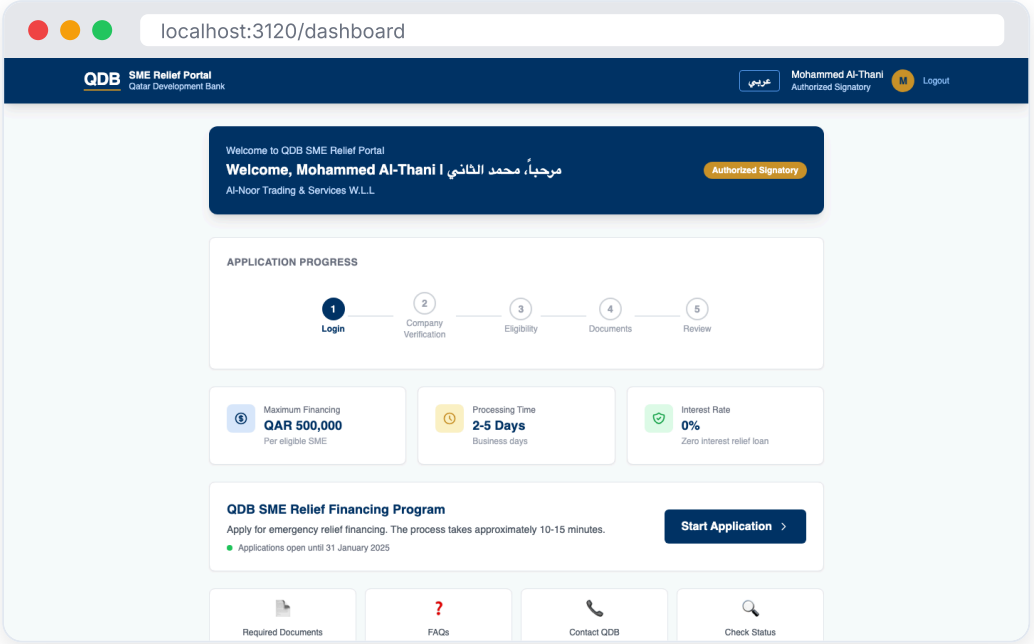
Login & Dashboard

STEP 1 — Secure Login via Tawtheeq (NAS)



Bilingual (Arabic/English) portal with QDB branding. Authentication is handled entirely through Qatar's National Authentication Service — no separate credentials required.

STEP 2 — Applicant Dashboard

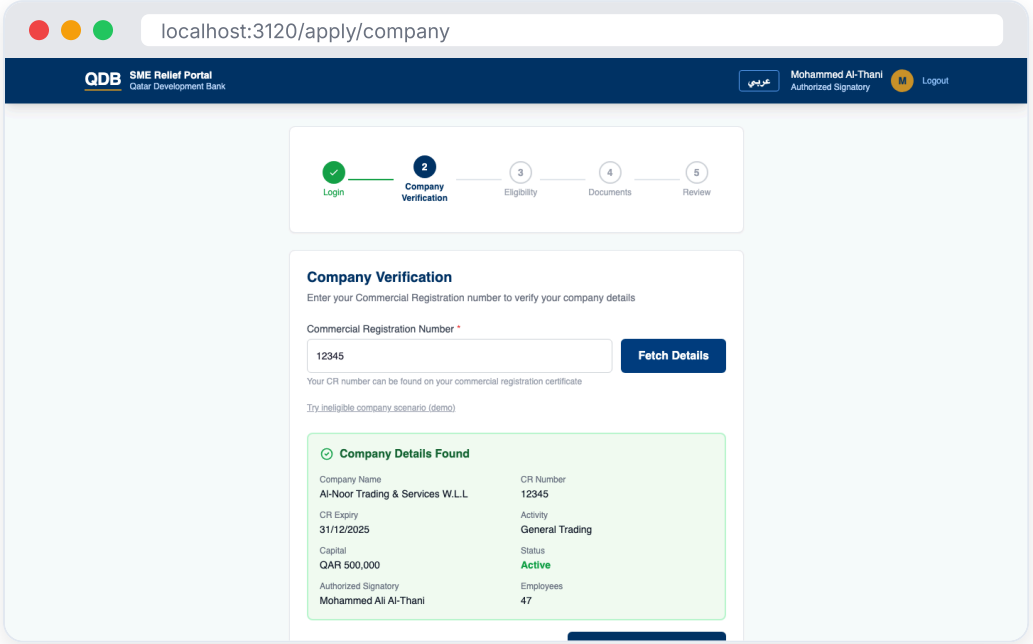


Personalised welcome with application progress tracker. Key program terms (QAR 500K, 2–5 days, 0% interest) displayed upfront to set expectations.

4 Portal Walkthrough — Applicant Journey (2/4)

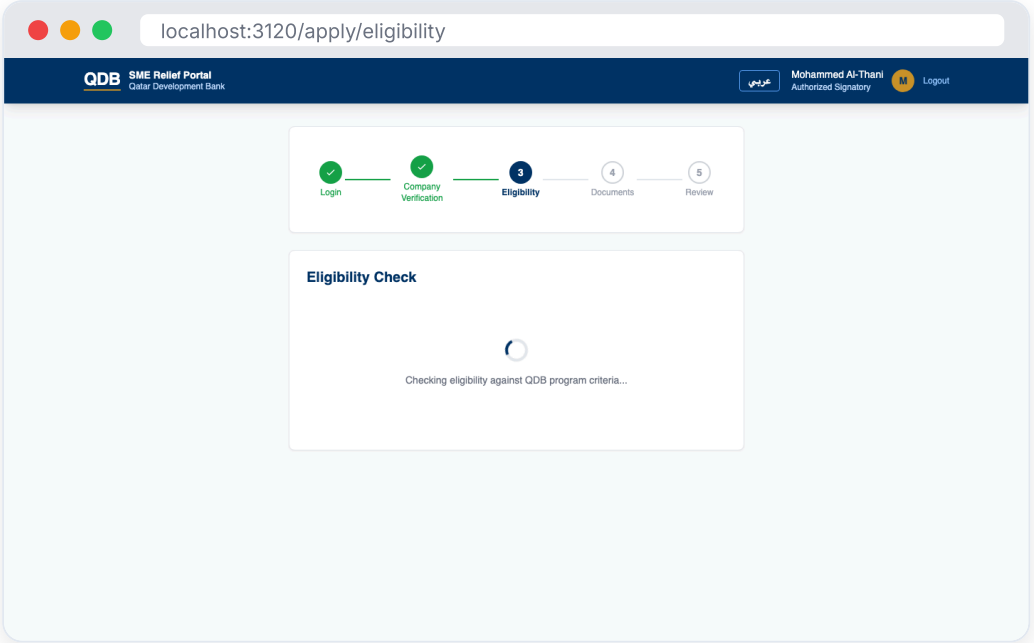
Company Verification & Eligibility Check

STEP 3 — MOCI Company Verification



Applicant enters their CR number. The portal calls the MOCI API live and returns verified company name, status, capital, employee count — **no manual data entry**.

STEP 4 — Automated Eligibility Assessment

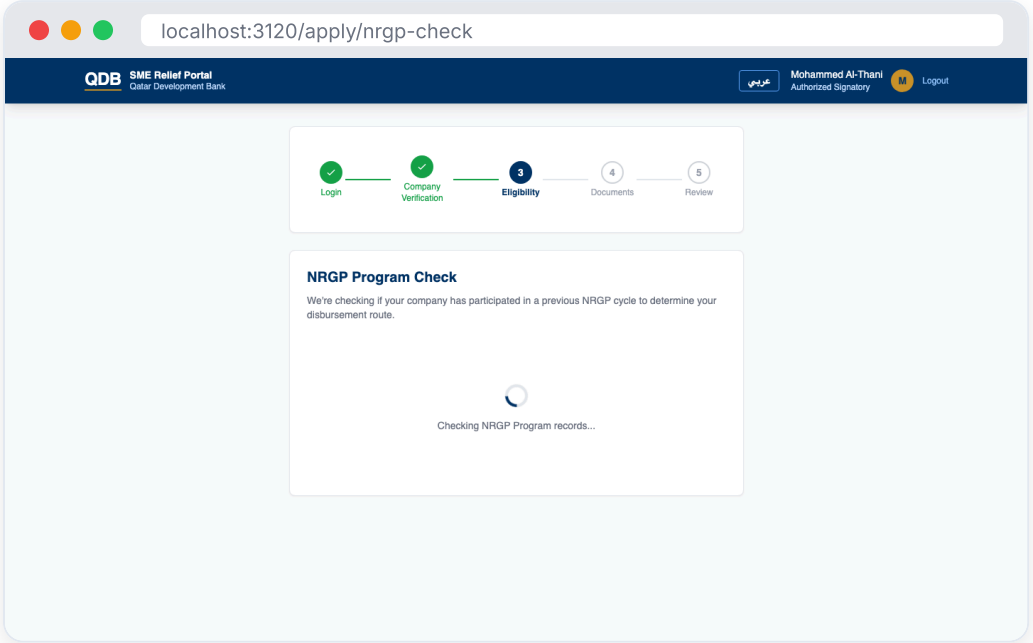


7 NRGP eligibility criteria evaluated instantly: active CR, pre-2024 registration, SME classification (<250 employees), Qatar operations, no NPLs, covered sector. **Instant pass/fail with clear reasoning.**

5 Portal Walkthrough — Applicant Journey (3/4)

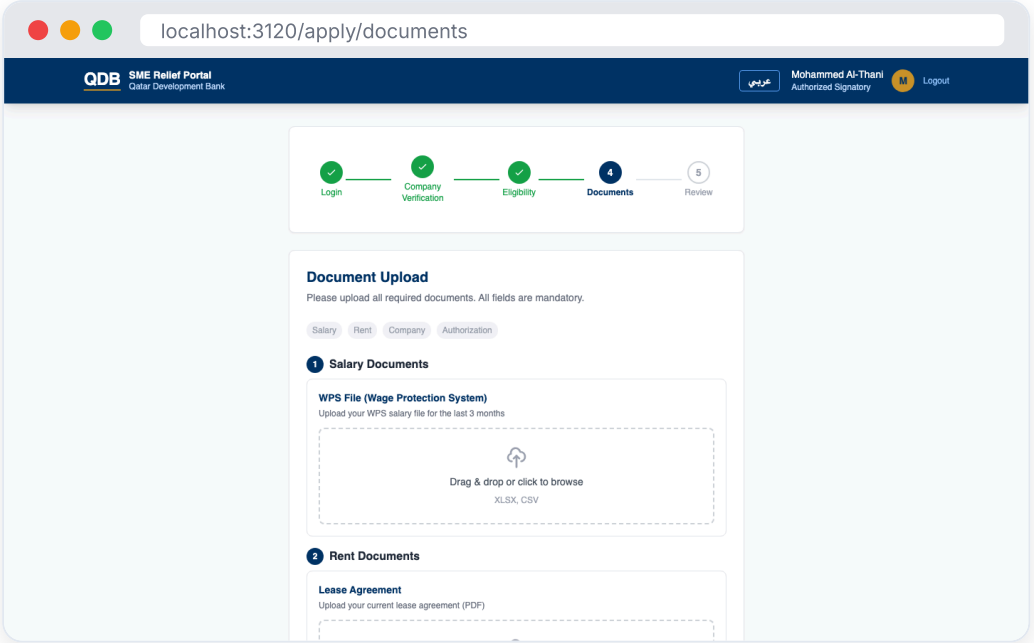
NRGP Routing & Document Upload

STEP 5 — NRGP Beneficiary List Check



Portal checks whether the CR appears in the existing NRGP beneficiary list (COVID-19 programme). If found → **Auto Disbursement**. If not → **Manual Review** by QDB Relationship Manager.

STEP 6 — Structured Document Upload

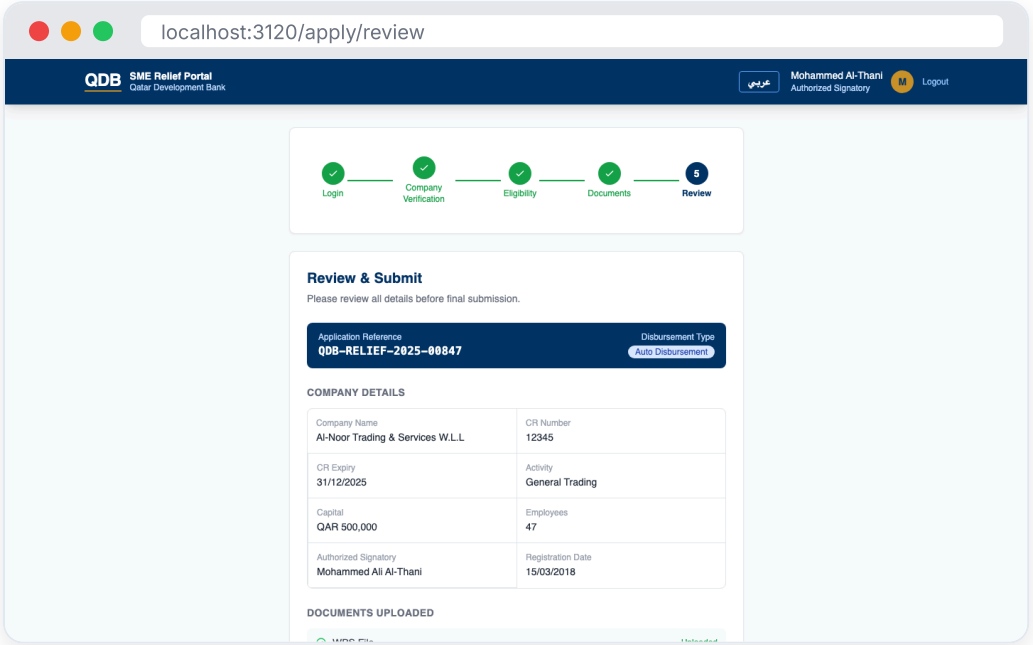


Four document categories: **Salary** (WPS XLSX/CSV), **Rent** (lease & invoice), **Company** (CR copy), **Authorisation**. WPS file is validated programmatically on upload.

6 Portal Walkthrough — Applicant Journey (4/4)

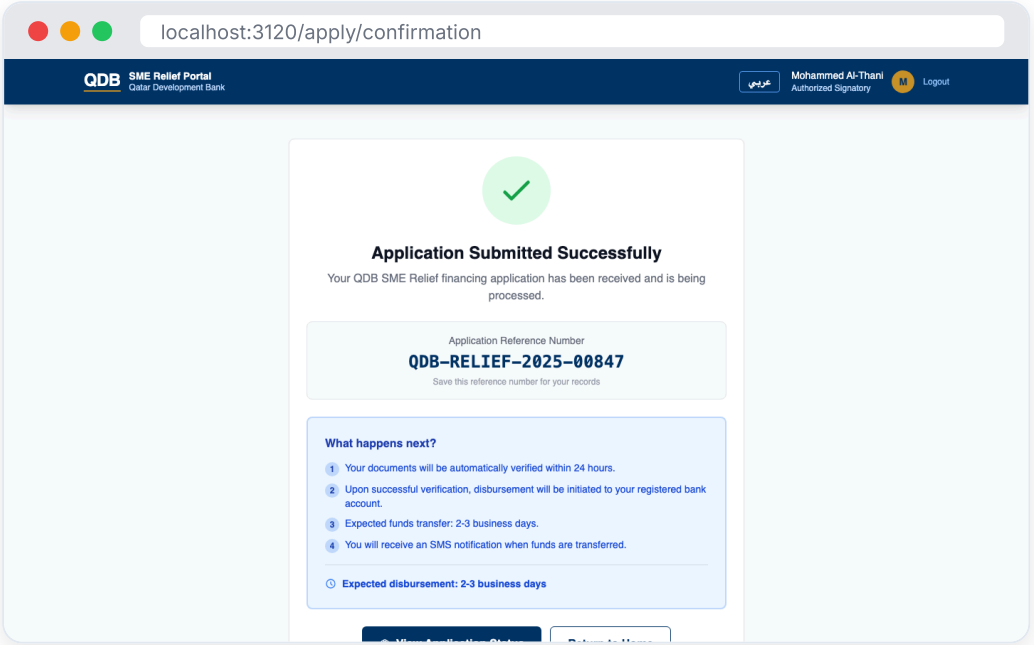
Review, Submission & Status Tracking

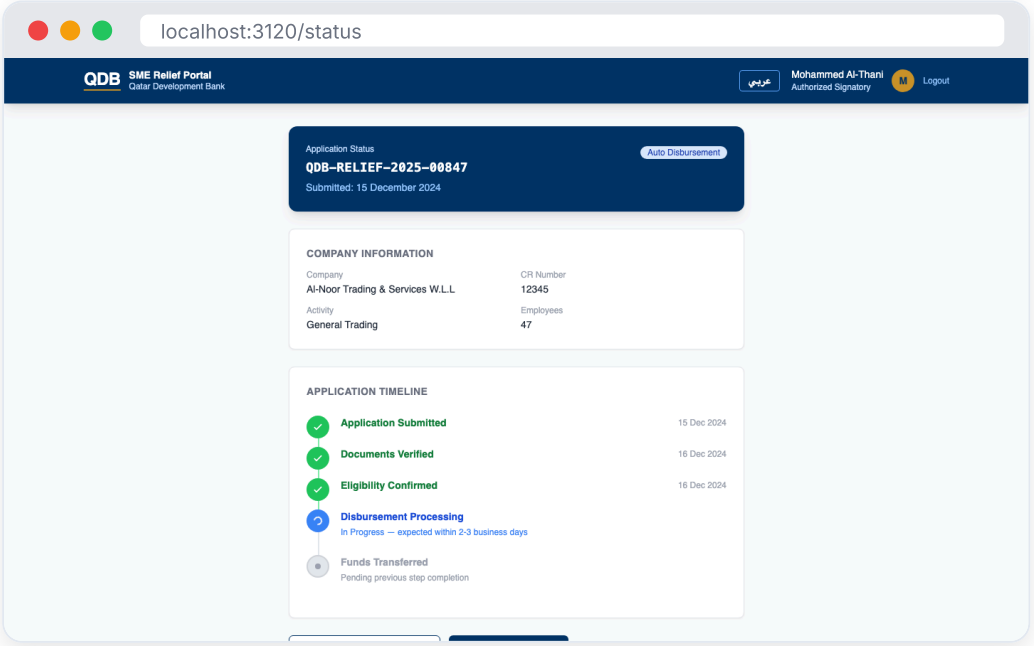
STEP 7 — Review & Submit



Full application summary with reference number (QDB-RELIEF-2025-XXXXX) and disbursement type confirmed before submission.

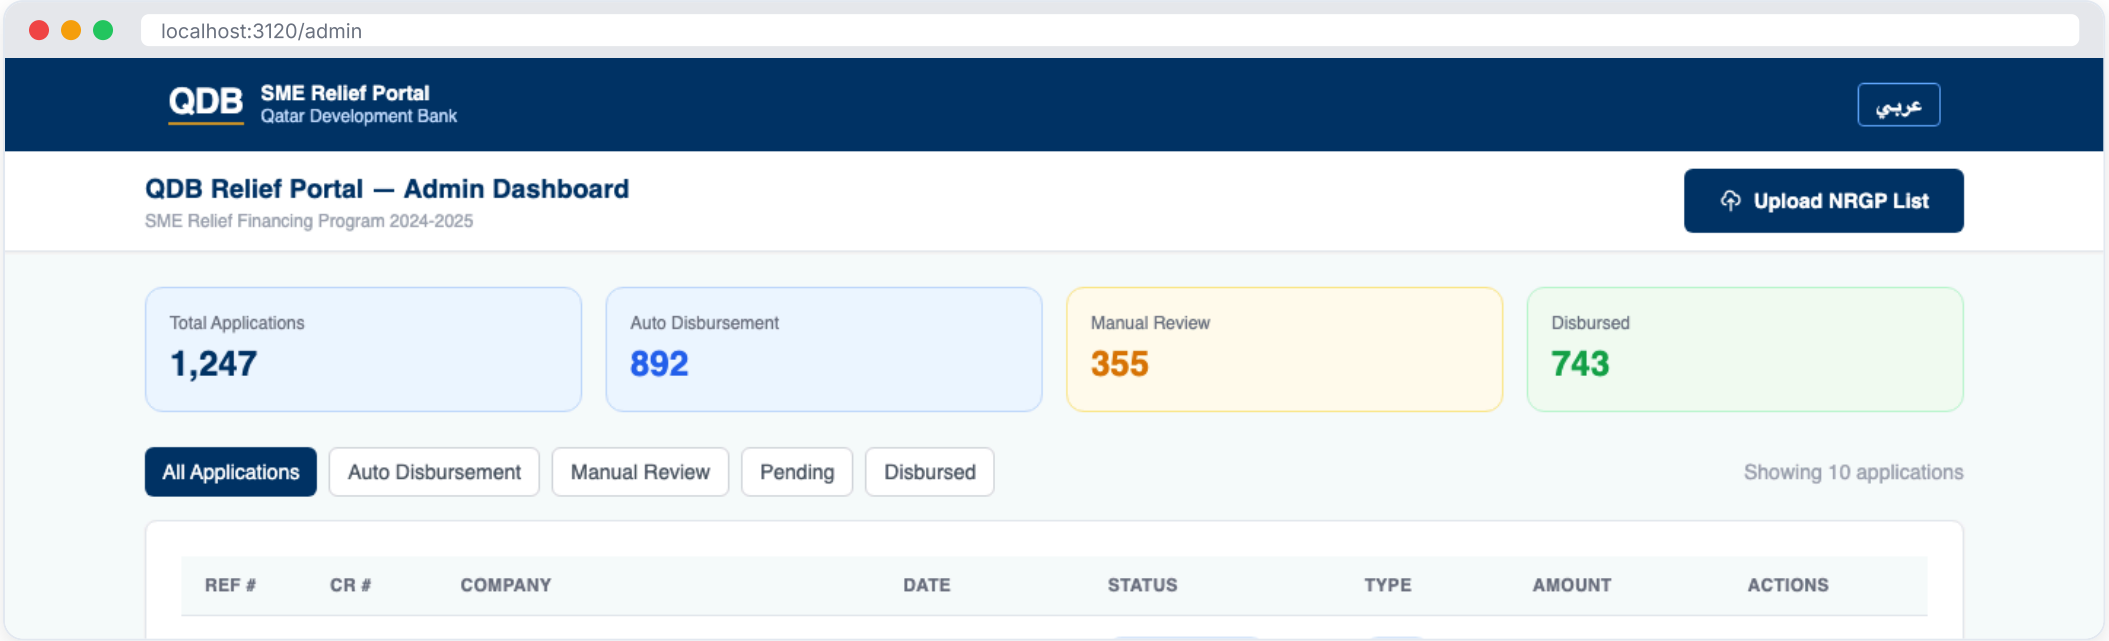
CONFIRMED + LIVE STATUS TRACKING





7 Admin Dashboard

QDB internal view — case management, NRGP list, program controls



📊 Live KPIs

Total applications, auto-disbursement count, manual review queue, disbursed count — all visible in real time.

🔍 Case Queue

Filter by status: All · Auto · Manual Review · Pending · Disbursed. Each case shows company, amount, RM assignment, and one-click approve action.

📋 NRGP List Upload

Admin can upload the official NRGP beneficiary CSV to update the auto-disbursement eligibility list when new cycles are activated.

8 System Integrations

Government & enterprise systems connected to the portal

System	Provider	Purpose	Data Flow	Status
Tawtheeq / NAS	National Authentication Service	Identity verification & OAuth login for applicants	Portal → NAS → Token → User identity	Prototype (mock)
MOCI API	Ministry of Commerce & Industry	Live CR data: company name, status, employees, capital, activity	Portal → MOCI API → Company record	Prototype (mock)
WPS API	Ministry of Labor	Validate salary obligations against payroll records	Portal → WPS API → Payroll validation result	Prototype (mock)
Dynamics 365 CRM	QDB Internal	Create disbursement cases (auto or manual) for QDB processing	Portal → CRM API → Case created → RM notified	Prototype (mock)
Azure Blob Storage	Microsoft Azure · Qatar North	Encrypted document storage with time-limited signed URLs	Portal → Blob → Signed URL → CRM / RM access	Architecture defined

Data Security & Compliance

🔐 **Authentication**
All integrations use OAuth 2.0 and API keys stored in Azure Key Vault. No credentials in code or config files.

🛡️ **Data Residency**
All data stored in Azure Qatar North region. Documents encrypted at rest (AES-256) and in transit (TLS 1.3).

📋 **Audit Trail**
Every application step, eligibility decision, document upload, and CRM action is immutably logged with timestamp and user ID.

🚫 **Duplicate Prevention**
100% duplicate CR detection — one application per CR per relief period, enforced at API level before any processing.

9 Success Metrics & Targets

How we measure programme effectiveness

Metric	Target
Auto-disbursement end-to-end time	**< 1 business day**
Manual review processing time	**< 5 business days**
Document re-submission rate	**< 10% (from 40–60%)**
Applications processed per week	**500+ (from ~20)**
NAS authentication success rate	**> 98%**
MOCI API success rate	**> 99.5%**
WPS validation completion rate	**> 95%**
CRM case creation failure rate	**< 0.1%**
Portal uptime	**> 99.5%**
Duplicate detection rate	**100%**
Audit trail completeness	**100%**
Applicant satisfaction score	**> 4.0 / 5.0**

Before vs. After

MANUAL PROCESS (TODAY)

- 15–30 business days per application
- ~20 applications per week maximum
- 40–60% document re-submission rate
- No real-time status for applicants
- Eligibility assessed manually by RM

DIGITAL PORTAL (TARGET)

- < 1 day (auto) / < 5 days (manual)
- 500+ applications per week
- < 10% document re-submission
- Real-time status tracking via portal
- Automated eligibility in seconds

📈 25× Throughput Improvement

Moving from ~20 to 500+ applications per week — a 25× increase — means QDB can serve the full affected SME population within the first month of activation, preventing the wave of WPS violations and lease defaults.

🎯 6–8 Week Delivery Target

The prototype is complete. Integration work with NAS, MOCI, WPS, and Dynamics CRM is the remaining critical path. The 6–8 week window is achievable given existing QDB integration relationships.

10 Technology Stack & Delivery Plan

Architecture choices and timeline to production

🏗️ Technology Stack

Frontend
Next.js 14 · React 18 · Tailwind CSS

Backend
Fastify · Node.js 20 · TypeScript

Database
PostgreSQL 15 · Prisma ORM

Hosting
Azure Qatar North · AKS / App Service

Storage
Azure Blob · GRS · AES-256

Secrets
Azure Key Vault · Managed Identity

CDN / WAF
Azure Front Door · DDoS protection

Monitoring
App Insights · Log Analytics

🌐 Bilingual & Accessible

Full Arabic/English language support with RTL layout. WCAG 2.1 AA accessibility compliance. Mobile-responsive for applicants submitting via phone.

DELIVERY TIMELINE (6–8 WEEKS)

Week 1–2 Integrations	Week 3–4 QA & UAT	Week 5–6 Staging	Week 7–8 Go Live
NAS · MOCI WPS · CRM APIs	E2E testing Security audit	QDB review Pilot users	Production deployment

✅ Prototype Status

Full applicant journey is functional in the prototype — login, CR verification, eligibility check, NRGP routing, document upload, review, confirmation, and status tracking. Admin dashboard is operational. All screens are bilingual.

🔴 Remaining Critical Path

- NAS (Tawtheeq) OAuth integration — QDB IT dependency
- MOCI live API credentials and endpoint agreement
- WPS API access from Ministry of Labor
- Dynamics CRM API connector configuration
- Azure Qatar North environment provisioning

Recommendation: Proceed to Integration Phase

The prototype demonstrates a fully functional end-to-end digital workflow. The business case is clear, the framework is approved, and the urgency is real. Every week of delay is another month of WPS exposure for Qatar's SME sector.

01
Approve integration access requests for NAS, MOCI, WPS, and Dynamics CRM

02
Provision Azure Qatar North environment and assign QDB IT resources

03
Define eligibility criteria edge cases with QDB Credit & Compliance teams

04
Conduct UAT with 3–5 pilot SMEs before full programme activation
